

ANNEX II + III : TECHNICAL SPECIFICATIONS + TECHNICAL OFFER

Contract title : Supply and aerial distribution of rabies vaccines

Publication reference : EuropeAid/133786/C/SUP/RS

p 1 /...

Column 1-2 should be completed by the Contracting Authority
Column 3-4 should be completed by the tenderer
Column 5 is reserved for the evaluation committee

Annex III - the Contractor's technical offer

The tenderers are requested to complete the template on the next pages:

- Column 2 is completed by the Contracting Authority shows the required specifications (not to be modified by the tenderer),
- Column 3 is to be filled in by the tenderer and must detail what is offered (for example the words "compliant" or "yes" are not sufficient)
- Column 4 allows the tenderer to make comments on its proposed supply and to make eventual references to the documentation

The eventual documentation supplied should clearly indicate (highlight, mark) the models offered and the options included, if any, so that the evaluators can see the exact configuration. Offers that do not permit to identify precisely the models and the specifications may be rejected by the evaluation committee.

The offer must be clear enough to allow the evaluators to make an easy comparison between the requested specifications and the offered specifications.

1.1. Description of the Supply

The contract is the supply, delivery, storage, transport and distribution by the Contractor of the following goods in given quantities for specified areas in Serbia according to the distribution list defined in this Technical Specifications, DDP (Delivery Duty Paid) within the periods or dates specified in Article 13 of Special Conditions for the rabies vaccination campaigns in 2014 and 2015.

4

Rabies vaccines for oral vaccination		
Item n°	Item	Quantity
1.1	Rabies Vaccine Bait: Vaccine for the oral immunisation of red foxes (vulpes vulpes) to prevent infection by the rabies virus, enclosed in a matrix which is edible by and appealing to the target species and which is designed to be distributed by low altitude aerial drops for spring campaign 2014.	1.610.000
1.2	Rabies Vaccine Bait: Vaccine for the oral immunisation of red foxes (vulpes vulpes) to prevent infection by the rabies virus, enclosed in a matrix which is edible by and appealing to the target species and which is designed to be distributed by low altitude aerial drops for spring 2014 for selected risk areas in Belgrade.	9.000
1.3	Rabies Vaccine Bait: Vaccine for the oral immunisation of red foxes (vulpes vulpes) to prevent infection by the rabies virus, enclosed in a matrix which is edible by and appealing to the target species and which is designed to be distributed by low altitude aerial drops for autumn 2014.	1.610.000
1.4	Rabies Vaccine Bait: Vaccine for the oral immunisation of red foxes (vulpes vulpes) to prevent infection by the rabies virus, enclosed in a matrix which is edible by and appealing to the target species and which is designed to be distributed by low altitude aerial drops for autumn 2014 for selected risk areas in Belgrade.	9.000
1.5	Rabies Vaccine Bait: Vaccine for the oral immunisation of red foxes (vulpes vulpes) to prevent infection by the rabies virus, enclosed in a matrix which is edible by and appealing to the target species and which is designed to be distributed by low altitude aerial drops for spring 2015	1.610.000
1.6	Rabies Vaccine Bait: Vaccine for the oral immunisation of red foxes (vulpes vulpes) to prevent infection by the rabies virus, enclosed in a matrix which is edible by and appealing to the target species and which is designed to be distributed by low altitude aerial drops for spring 2015 for selected risk areas in Belgrade.	9.000

The territory for vaccination shall be the whole territory of Serbia excluding the urban settlements. Total area of the country is 78.998 km². Area designated for vaccination is about 70.000 km².

Additional reinforcement vaccination by the Contractor for selected risk areas in Belgrade shall be done via helicopter and/or manual distribution. The planned number of baits for additional reinforcement vaccination for selected risk areas in Belgrade is $3 \times 9.000 = 27.000$ vaccine baits in total distributed in 3 vaccination campaigns (9.000 baits per campaign).

1.2. Technical requirements

The technical specifications are requirements based on the respective item's projected function or purpose.

Items non compliant with technical specifications will be rejected.

Delivery of the vaccines

The vaccine shall be delivered in the Contractor's storage facilities at the territory of Serbia, at the temperature and all other conditions specified by the vaccine producer.

Vaccines should be packed in cardboard boxes or in polyethylene bags and unless otherwise specified by the producer of vaccines kept in a dark place.

Vaccines handling and storage including maintenance of the cold chain throughout the vaccination campaign must fulfill all conditions and standards set by the vaccine producer.

Storage of the vaccines

Vaccine baits should be stored all the time in chillers equipped with temperature data loggers.

The storage facility should be equipped with device that is able to keep record of the temperature and other parameters specified by the producer during each day of the storage.

Storage facility shall be prepared also at the airports (-20 °C cooling trucks or freezers with sufficient capacity for a quantity of baits needed for at least one day of each daily flight activity at every airport).

Transport of the vaccines

The day before being distributed, baits are to be delivered to the places where they will be loaded on the helicopters / airplanes.

Transport of vaccines from storage facility to the airports shall be done by using adequate cooling trucks (-20 °C) so that the vaccine will be transported in a frozen condition.

Places for distribution of vaccines (airports) shall be equipped with suitable refrigerators. In an event that uploaded baits are not distributed during the same day (for justified reason like bad water, etc.), they should be stored at temperature of +1 to +8 °C, but not longer than 3 days.

Distribution of the vaccine baits

Aerial distribution by the Contractor of the baits for items 1.1, 1.3, and 1.5 may be performed either by helicopter or by fixed-wing airplane (please also see Article 9 of the Contract Special Conditions).

Items No. 1.2, 1.4 and 1.6 are to be distributed by the Contractor via helicopter and/or manual distribution.

The helicopters or airplanes shall be equipped with GPS system and supported by a computer program that will allow control of the ejection process of bait (number, time, location) used during the spread of the baits. The contractor is obliged to deliver detailed characteristics of the computer programme to be used.

The spread of baits from the helicopters or airplanes shall be done by special equipment. Therefore, the aircrafts shall be equipped with a system for spread of baits connected with GPS system in order to ensure the exact distribution depending on the speed and height of the flight and keep automatic record of the quantity and location of the spread baits.

Where manual distribution will be used, the persons distributing vaccine manually shall use appropriate GPS devices to register the walking routes and the position where each bait is placed. The information on the course of distribution shall be possible to be downloaded from the computer database after each flight or whole campaign. There should be a possibility to record distribution data in computer unit equipped with a slot for memory card. Date, time and position of each vaccine bait and real time cross country flight or distributor walking routes should be recorded / mapped.

Control of quality before realization in the field

Please refer to Articles 13 and 25 of the Contract Special Conditions.

Each batch of vaccine shall have expired date minimum 12 months from the date of delivery.

Contractors human resources

Please refer to Article 9 of the Contract Special Conditions.

The Contractor is obliged to assure presence of the responsible person ("Contact person") in Serbia during both the pre-vaccination activities and vaccination campaign. He / she will be responsible for all contacts with the Contracting Authority / Beneficiary. His / her CV should comply with following requirements:

Qualifications and skills

- University level degree in veterinary science / pharmaceutical industry or similar or at least 10 years of professional experience in a relevant field

- Fluency in English and preferably knowledge of the Serbian language

Professional experience

- At least 3 years of working experience in the veterinary, pharmaceutical, medicine, or other relevant field

The Contractor should ensure that the contact person and other personnel involved in the vaccination campaign have necessary competences for successful implementation of the vaccination campaigns.

Pčinjski	3.520	363	3.224	74.200	74.200	74.200
Total			69.996	1.610.000	1.610.000	1.610.000

Additional distribution of 9.000 live cell cultural vaccines against rabies for oral vaccination of foxes x 3 vaccination campaign (Items 1.2, 1.4 and 1.6) shall be done by helicopter and/or manual distribution in selected risk areas. The referred suburban areas in Belgrade include areas in the following municipalities:

- Cukarica
- Grocka
- Rakovica
- Voždovac
- Zvezdara

Total area of referred municipalities is about 658,30 km², however the risk area to be additionally vaccinated is estimated at about 300 km² as shown on the following map.

Therefore, the reinforcement distribution corresponds to additional density of baits per risk area of 9.000 vaccine baits / 300 km² = 30 baits per km².

The oral vaccination campaigns in marked risk areas should be organized at the same times when oral vaccination program in whole Serbia is performed.

1.5. Visibility

All equipment and/or its packages must have a durable self-adhesive EU visibility logo.

The Contractor shall produce a draft of the layout and submit it for approval by the Contracting Authority prior to production / delivery. Following the request of the Contractor, the Contracting Authority shall advise the successful bidder on the exact dimension, layout, colour regime and wording/symbols of these self-adhesive stickers upon contract signature.

The design of the EU visibility sticker must be approved by Project manager in advance.

All supplies must comply with the generic Visibility policies in force within the scope of external aid contracts financed from the EU general budget; tenderers will thus be aware that certain visibility rules apply and that the guidelines and manuals concerned may be found in the EUROPEAID website, at: http://ec.europa.eu/europeaid/work/visibility/index_en.htm.

As part of the request for provisional acceptance, the Contractor must provide documentary evidence of compliance with the visibility rules.
